(54) Gun security systems

(57) A lockable gun rack comprises upper and lower wall-mounted means 2,3, the upper means receiving the end of the barrel of the gun and the lower means having a removable L-shaped member 3A to which may be secured a padlock for preventing unauthorised removal of the gun. A further support means 4 for the butt of the gun may be provided or the butt may simply rest on the floor. Various alternative forms of upper means are disclosed.

SPECIFICATION

Gun security systems

- 5 This invention relates to a gun security system.

The gun security system is a method of securing (by means of the gun security system) a weapon or weapons. The gun security system is to restrict removal of such weapon or weapons from place or places where the gun security system may be installed, thus restricting the removal of such weapon or weapons, by unauthorized person or persons. By means of using the gun security system the weapon or weapons may be secured.

10 A specific embodiment of the invention will now be described by way of example with reference to the accompanying drawings in which.

20 *Figure 1 and Figure 2* shows in perspective the weapon or weapons installed in the gun security system.

Figure 3 and Figure 4 shows the items to make up the gun security system.

To enable the gun security system to be installed, suitable fixing holes will be provided to suit, suitable fixing of the gun security system.

30 CLAIMS

1. The gun security system is a simple form of security to a weapon or weapons.

35 The gun security system is made up from a bracketing system which when installed will form a security system for a weapon or weapons as shown in Figs. 1 and 2.

2. The gun security system consists of items to form a security system to prevent removal of the weapon or weapons by unauthorized person or persons, thus restraining the weapon or weapons by means of this gun security system.

40 3. The gun security system as described herein with reference to Figs. 1 to 4 of the accompanying drawings.
